

Figure 1. A schematic diagram illustrating the experimental design. The figure shows two parallel horizontal timelines. The top timeline represents the "Control group" and the bottom timeline represents the "Experimental group". Both groups start at "Baseline" and proceed through "Pre-treatment", "Treatment", and "Post-treatment" phases. In the "Control group", the "Treatment" phase is labeled "No treatment". In the "Experimental group", the "Treatment" phase is labeled "Treatment". The "Post-treatment" phase follows the "Treatment" phase in both groups. The timelines are connected by vertical arrows indicating the progression of time.
